

INTRO

to

GOES provides revolutionary service to the Drilling Rig industry by combining state of the art technology with unparalleled industrial fluid refining ability to save you time, money, and prolong the life of your equipment while significantly reducing downtime and eliminating fluid disposal charges. Every piece of equipment on your drilling rig is covered by GOES Servicing. You no longer have to rely on rig hands or others to service your equipment.

GOES

TURN KEY

SERVICE

Our competitively priced monthly service package can cover all types of industrial fluids including hydraulics, gear, engine, and compressor oils, transmission fluid, and coolants. We are confident that we can reduce your monthly service costs by up to 15% and significantly prolong the life of your equipment, minimize downtime, and have a positive impact on the capacity utilization of your rig.

WORLD-WIDE ACCESS TO DATA

— 24/7 —

Your rig is then placed on a monthly servicing rotation. Our process is strategically designed to keep all of your fluids cleaner than when they were brand new, and quite literally “unused.” GOES Energy comes to you, checks your fluid levels without any downtime, and provides you with full analysis reporting, status photographs, and important data each month for every piece of equipment on your rig. Once the particle count, levels, and other data is received, our state-of-the-art mobile application and website are updated to provide you with that information in real time. All you have to do is log into your account and you can access history, charts, and other relevant and timely data without ever having to go to your rig. Only GOES provides this kind of comprehensive servicing.

CUT COST *with* GOES SERVICING

We will conduct a comprehensive site survey on all of your equipment at no cost to you. This detailed report will demonstrate how installing a GOES filtration system and accepting our service agreement will save you money each and every month. Once the terms are accepted, we will collect the last monthly payment and will schedule a subsequent visit to install your customized one-micron bypass filtration system within 90 days.
